

Freight Forwarding

Hawkeye Tracking's supply chain logistics capabilities includes freight forwarding and all associated services associated with export and import of cargo of all types, including Hazardous Materials, over-size cargo, high value articles, and defense equipment controlled by the Arms Export Control Act (AECA) and International Traffic in Arms Regulations (ITAR). We specialize in overall program management of a customer's transportation requirements, and freight forwarding is a critical step in that process. Asset Visibility is a key component of customer success, and full asset visibility is provided throughout the freight forwarding process, including receipt, on-hand, consolidation, and shipment transactions. With offices and agents in many foreign countries, Hawkeye can ensure export cargo is tracked to its final destination and provide proof-of-delivery when required.

Hawkeye Tracking handles the following types of cargo:

- Hazardous Materials
- Defense Equipment
- Heavy lift
- Over-cube
- 20' and 40' containers
- Pallets
- Disaster Relief

Hawkeye will also provide comprehensive solutions to complex transportation needs. In conjunction with freight forwarding, Hawkeye provides tailored asset tracking from origin to destination; secure long-term storage to include over-size shipments; break-bulk; consolidation; containerization; and charter services.

Qualifications include registration with Department of State Directorate of Defense Trade Controls (DDTC); Customs-Trade Partnership Against Terrorism (C-TPAT); Federal Maritime Commission (FMC); Transportation Security Administration (TSA); Non-Vessel Operating Common Carrier (NVOCC); and Business Alliance for Secure Commerce (BASC).
